

Things you must know...

- ✓ QWERTY: Is a US Standard for Modern Computer Keyboards. It takes its name from the first six characters seen in the far left of the keyboard's top row of letters.
- ✓ Wi-Fi abbreviated as **Wireless Fidelity**

Typical Wi-Fi Router

CRYPTOGRAPHY FOR YOU...

Cryptography is the practice and study of hiding information. Modern cryptography intersects the disciplines of mathematics, computer science, and engineering. Applications of cryptography include ATM cards, computer passwords, and electronic commerce.

In cryptography, a **cipher** (or cypher) is an algorithm for performing encryption or decryption — a series of well-defined steps that can be followed as a procedure.

Encryption: In cryptography, encryption is the process of transforming information (referred to as plaintext) using an algorithm (called cipher) to make it unreadable to anyone except those possessing special knowledge, usually referred to as a key. Encryption has long been used by militaries and governments to facilitate secret communication. Encryption is now commonly used in protecting information within many kinds of civilian systems

Encryption can be used to protect data "at rest", such as files on computers and storage devices (e.g. USB flash drives). In recent years there have been numerous reports of confidential data such as customers' personal records being exposed through loss or theft of laptops or backup drives.

Encryption is also used to protect data in transit, for example data being transferred via networks (e.g. the Internet, e-commerce), mobile telephones, wireless microphones, wireless intercom systems, Bluetooth devices and bank automatic teller machines. There have been numerous reports of data in transit being intercepted in recent years. Encrypting data in transit also helps to secure it as it is often difficult to physically secure all access to networks.

Caesar Cipher

In cryptography, a Caesar cipher, also known as a Caesar's cipher, the shift cipher, Caesar's code or Caesar shift, is one of the simplest and most widely known encryption techniques. It is a type of substitution cipher in which each letter in the plaintext is replaced by a letter some fixed number of positions down the alphabet. For example, with a shift of 3, A would be replaced by D, B would become E, and so on. The method is named after Julius Caesar, who used it to communicate with his generals.

General Example which uses a right shift of 3:

Plain Text: " I AM A CEO IN ZIAC "

Cipher Text: "L DP D FHR LK CLDF "

Brain Teaser

A long train, half a kilometre long, is about to enter a long tunnel. The tunnel is 10k long. If the speed of the train is 35kph, how long will it take for the entire train to pass through the tunnel - from the front of the train entering to the end of the train leaving the tunnel ?

Question: Why can't PROGRAMMERS
build any cars?

Answer: Cause when an accident
happens the airbag will always ask:
"Are you sure?"

Bengaluru Decoded.

Koramangala

Koramangala was not too long ago, a sought after residential locality with its wide boulevards and posh bungalows. The crime rate has increased considerably over the past few years. Though the civic authorities are trying hard to cope with the unprecedented stress of improvising the infrastructure, a lot needs to be done

SRASHTA NETWORKS,

Hi”
The year has almost gone, but made us strong.
The path was long, but we walked with a song
There were fears , tears & cheers as we traveled
the year 2009

We know that GOD doesn't require us to " Be
The Best" He just wants us to know " Do Our
Best" and take care of the rest! Wishing your
happy memories of 2009 & have a great journey
ahead

WISHING ALL A VERY HAPPY
NEW YEAR 2010 !!!!!
