Surfeit on Technology by Mr. Rajesh

May Day

Haymarket Massacre

Condolences

Our condolences to victims, family members & people who have suffered due to the natural calamity at Kedarnath, Uttarakhand State.

We Salute the Indian Army, Air Force and voluntary organizations for saving thousands of lives of people stranded in Kedarnath region by evacuating, providing medical help and distributing food for survival.

Greetings to you all!

I came across a speech at my son's school; since the topic was interesting I joined as one of the audience to the speech. Here are some valid points extracted which I would like to share with you all.

In today's world, COMPETITIVENESS has been the key word. To be more competitive, we need to use the current technology to the best.

As many of us know that the word "TECHNOLOGY" is derived from Greek language. TECHNO stands for an art, skill or craft and LOGIA means the study of a topic / subject or branch of knowledge of a discipline.

In today's world though there is no escape from technology in almost all cases, but this is not a requirement. Many of us agree or disagree to respect and admire technology. This is because it is there to benefit many. Without the technological advances the world would not be as we see it today.

The technology growth in human life is more comfortable like never before. There is no place in this world possible without the use of technology. Technology touches our daily life in almost everything. By using technology one can save time (which is money now), enriches the knowledge of one and travelling round the world has become effortless.

There is no field either industries, business, education etc in the world that Technology has affected. What people don't understand is that technology as it is believed to enhance the world can also be equally bad.

LABOR'S DAY

During late 1800s, average worker worked 12 hours a day and 7 days a week. Despite restrictions, young children toiled in mills, factories and mines across the country, earning a fraction of their adult counterparts' wages.

Workers protested organising strikes and rallies, compelling Employers to renegotiate on working hours and salaries.

The first Labor Day holiday was celebrated in the year 1882 and later from 1884 on first Monday of every September. It constitutes national tribute to the contributions done by the workers for the strength, prosperity and well-being of Americans.

For many Americans labor's Day also represents the end of the summer season.

MAY DAY

The Labour Movement began during the industrial revolution, when agricultural jobs declined and employment moved to industrial areas. Workers objected for their long working hours.

International Workers' Day also known as May Day is the commemoration of several killed on 4th May 1886 during a general strike for eight-hour workday in Chicago.

May 1st is recognized as a national holiday in more than 80 countries.

Surfeit on Technology

by Mr. Rajesh

Technology has helped to speed up the communication and decrease the cost. Earlier if anyone has to buy a bunch of flower, they need to visit florist and pay money for purchasing. Due to invent of technology, the same can be done through internet.

However, at the same time it has caused people to become more impersonal with each other. In good olden days the major form of communication was in person, visiting each other, go to public meetings / gatherings if provided an opportunity. As technology grew personal visits started shrinking.

Though the Technology is building bridges between people if we look at the other side, it is also building ever stronger walls between people. Some people are surrounding themselves with modern technology while paying little attention to humanity. Others use technology to better understand their fellow man to overcome physical distance, establishing relationships of solidarity and sympathy around the globe. The negative part is humans are glued to systems and no physical activity.

We could discover the effect of technology to our daily food. Fast food can be known as the best companion for working people or to those students who are all fighting for time. Processed food is consumed to save time which will have negative effect on our daily life leading to obesity. The main cause for obesity as few studies suggest is from the fast food or high calories consumptions in those processes food.

There is a realm of influence in the use of technology, whether driving an automobile, using a phone, E-mailing or planning a travel. An unfortunate dynamic of modern technology is that it often works through competition; many technologies benefit early adopters at the expense of non-adopters. Atomic energy was invented to generate electric power, but people used it as weapon killing lakhs of humans along with animals.

In today's world everyone wants to be entertained more often. Technology has given Radio, TV, Satellite TV, mobiles, 3G/4G networks to us. We cannot imagine the world without anyone of this. But on the other aspect people thinking levels has been down, they have become lazy due to more and more watching, listening, and playing, all because of technology.

All these forms of entertainment like the Internet, television and even video games seems to be harmless to people, but they are really not. When the Internet was first introduced, people never thought it would be as big as it is today. Introduction of internet has opened huge time saving techniques.

Solution to last Brain Teaser

1. Turn ON the first switch and leave it for few minutes. Then turn OFF the first switch and switch ON the second switch.
 2. Enter the first floor room. If the light bulb is lit, the second switch is connected to it. If it is not lit, it might the first or the third switch.
 3. To check, touch the light bulb, it is HOT it is connected to the first switch.
- If it remains cold / normal, then it should be the third one.

Surfeit on Technology

by Mr. Rajesh

Internet has also misleading information posted, hacking personal info and pornography. On the other hand Internet has also rusted our brains, to find easy route to a destination but we depend directly on GPS navigation.

Although the Internet is a relatively new technology, mobile phone has created havoc in the recent life. SMS was a good means of communication, but spread to unwanted SMS / MMS, forcing government to limit the SMS usage.

Though the technology has helped people, as saying goes two face of a coin there are bad elements in the world to utilize the same to destroy its positivity. In other words, people tend to implement the latest technology before they understand precisely what it is or what business need it serves.

What if someone pulled the STOP button plug on our technology? Would engineers still know how to draft products? Would we still know how to ship a product or process an order? Would our financial transactions come to a halt? Would business come to a standstill?

The answer unfortunately is Yes. This highlights the over dependency we have developed on our technology and is cause for alarm. We are being driven by technology as opposed to the other way around. By unplugging our technology, we are unplugging the idea being human.

But without the technology is it possible for a man to go round the world in a day or reach out to moon or mars? Is it possible for us to predict the natural calamities? Or is it possible for a person to speak to their near ones who are off shore within seconds? What would have happened to our running time?

As the use of technology increases, social skills decreases but it is really in our hands how we take it. Life has great effect of technology. Without inventing electricity we would have spent our nights in dark. But invention lead to erase the darkness but we cannot blame for people getting shocks due to electricity. There is not any specific effect on life; it depends on how the technology is being used.

If the technology in used in a destructive way then it is the most harmful way for human race to see tomorrow. But if we use it for welfare of people then it can prove as boon to mankind. Finally come let's make this world a better place to live in.

THOUGHT FOR THE DAY

It is literally True that you can succeed best and quickest by helping others to succeed — **Napoleon Hill**

Brain Teaser

Ram, Rahim, Robert and Ranjeet Singh wants to cross the bridge at night. They have only one torch light with them. Only two can cross the bridge at a time. They need torch light to cross the bridge. Each of them walks at a different speed. Ram needs 1 minute, Rahim needs 2 minutes, Robert needs 5 minutes and Ranjeet Singh needs 10 minutes. A pair must walk together at the rate of the slower person. How these people can cross the bridge within 17 minutes?

DID YOU KNOW?

Mayday is an emergency procedure word given three times in a row ("Mayday Mayday Mayday").

This is used internationally, signaling a life-threatening emergency primarily by mariners and aviators.
